ORCHIDS

1950-51 Catalogue

NOW YOU SEE RED

Pure Blood-red Orchids have been the goal of Orchid breeders for many years.

Our premier Red Stud plants produce larger flowers than ordinarily seen.

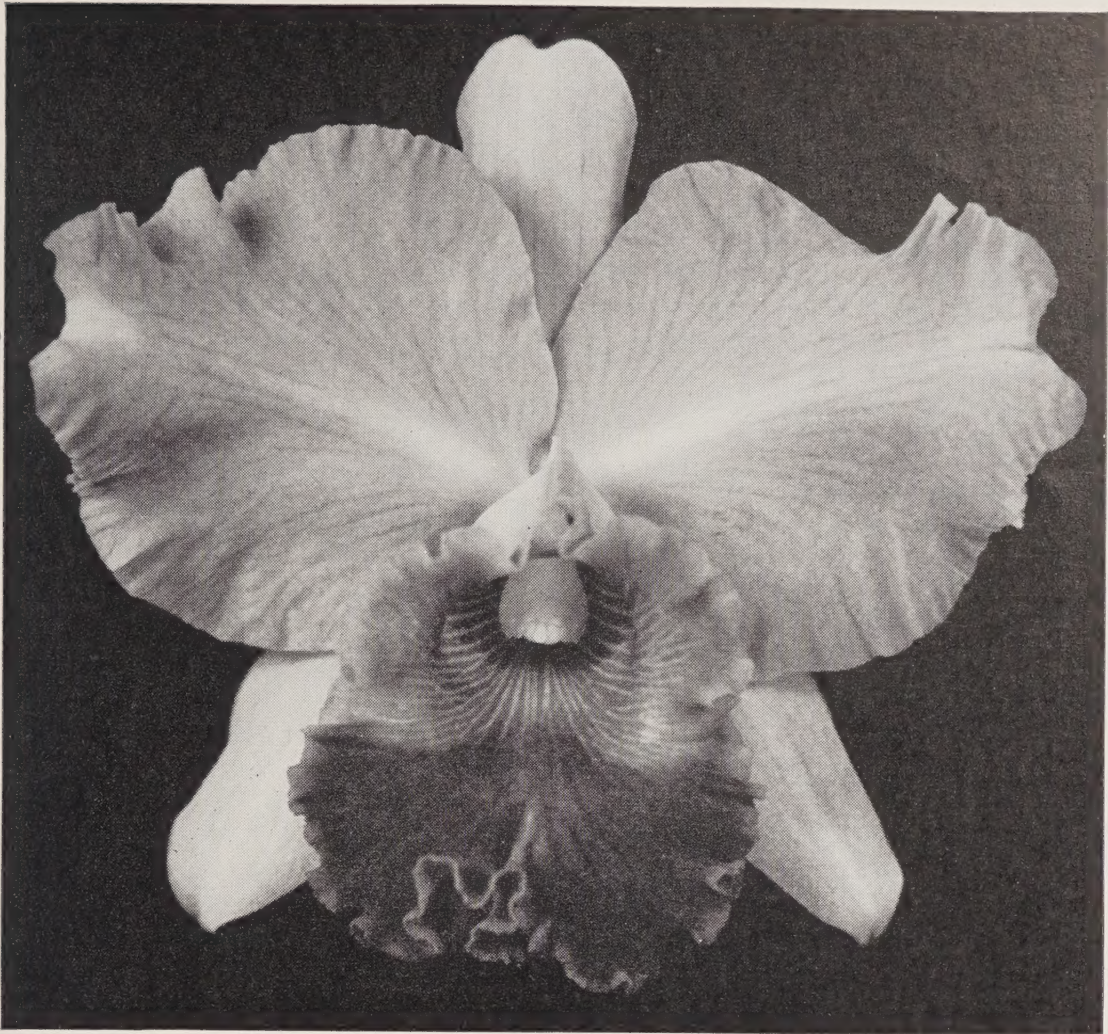

S. L. C. Phena var. Saturn FCC RHS, illustrated on the cover, is one of our outstanding Red Studs, which will produce the finest of color, form and substance in many of our seedlings of the future.

Through careful selection of Stud Plants, we endeavor to produce the unusual in Orchids, such as pure blood red, cherry-red, mahogany-red and other new red shades, as well as bronze variations, salmon, pink, yellow, greens, and perhaps browns.

We have for many years been assembling fine Orchid Stud Plants, and believe we have the finest collection in America.

Our collection of Reds are limited and are not offered for sale at the present time.

**SATISFIED CUSTOMERS
WHO KNOW
SAY**

“OUR COLLECTION OFFERS THE BEST IN QUALITY”

We are pleased once again to present you with our Catalogue which contains many new ideas for your growing enjoyment.

Demand has been very heavy for our outstanding stock which we have collected from all parts of the world. We apologize to our many customers who selected choice varieties from our Catalogue listing last year and had to wait until further divisions could be made on our scarce items.

Our outstanding stock has been constantly in demand and production has not, as yet, been adequate to meet the large number of requests for our choice stock.

Listed on the following pages are several choice items that are outstanding in their class which produce desired quality wanted in every collection today.

Our seed and seedling lists change periodically, therefore, we shall send our new lists to only those who are purchasing these items.

Exhibition Hybrids

Cat. No.	Name and Description		Bulbs	Pot	Price
1	C. ANN SANDER—Stud. Exceptionally outstanding Winter flowers— three to four flowers per stem—medium rose sepals and petals—dark lip	A.	4	5"	\$ 75.00

The preceeding stock listed are all of superb choice quality and are offered subject to prior sale, therefore, please state second or third choices. Further information requested will be given upon application. Our standardization policy has met the approval of our customers in the past and we shall continue to give our customers assured satisfaction on plant purchases.

NON-WARRANTY

Because growing conditions and cultural methods are not the same in every locality we—R. H. GORE - ORCHIDS—give no warranty express or implied, as to the productiveness of any of the plants we sell and will not be in any way responsible for the crop. Our liability is limited to the purchase price of plants. All prices listed in our catalogue are F.O.B., Fort Lauderdale, Florida.

Plants for the Amateur

Listed below are selected varieties for the amateur grower or beginner who desires to own a plant, strong in growth, and one which is easy to grow and flower.

We firmly believe a beginner acquiring his first Orchid plant should not invest heavily in the purchase of a rare or choice plant, until such time as he understands thoroughly the culture of Orchids. It is with this thought in mind that we list the following varieties, which are plants that are easy to grow and will reward the purchaser with good flowers.

SPECIAL SEED

The two crosses listed below have just been cut from the plants and contain fertile seed. They were cut too late to include them in the list above. Both crosses are outstanding and should produce exceptionally fine hybrids. Each cross is priced at \$15.00 per three flask package.

- 540 C. Labiata Alba var. Prince of Wales x C. Bow Bells var. Mother Superior.
(Two excellent heavy textured whites combined to produce a white, par excellent)
- 575 C. Labiata Alba var. Mrs. Wheeler x Lc. New York Alba—Gores var.
(Promises to be an outstanding white with rich colored lip)

Seed Pods Now in Development

Occasionally seed pods ripen and produce a low percentage of viable seed or entirely infertile seed. Our seed is guaranteed to germinate if our seed sowing instructions are followed. From the following list please state second and third choices in the event your first choice does not prove fertile enough for shipment as we do not ship infertile seed. Seed listed below should be ripe approximately ten to twelve months after the date of crossing. Mail us your reservation blank for seed and you will be notified when the pods are ripe and fertile.

Seed Sowing Kit

Raise your own Orchid seed with our seed sowing kit. Many Orchid enthusiasts have desired to sow their own Orchid seed but have been doubtful of this enterprise. We have prepared a handy Orchid kit which is easy to use. It is just like baking a cake, all you have to do is mix the ingredients and heat.

Illustrated above is our sowing kit which contains the stock solution, agar, flasks, seed-sowing pipet, sterilizing solution and sowing bottle. All instructions for the procedure and seed-sowing are included with the kit.

PRICE

3 Flask Sowing Kit	\$ 5.00
5 Flask Sowing Kit	9.00
10 Flask Sowing Kit	15.00

COMMUNITY POT MIXTURE

We have available a very fine mixture for Community Pots which can also be used for individual pots in seedling work. Our mixture is porous allowing good air circulation and drainage. Our mixture contains the best materials obtainable to insure a good growing composition.

PRICE

10 cents per pound.	
100 lbs.	\$9.50

Flasks

Flasks are packed with great care in special boxes to insure safe delivery. However, some shipments may receive rough handling enroute, for which we cannot be held responsible. Flasks listed below are of the 500 ml. size and contain husky growing seedlings.

<i>No.</i>	<i>Parents</i>	<i>Color</i>	<i>Price each Flask</i>
307	Lc. Karen x C. Helen Adams var. Governors' Club FCC AOS	Dark Lav.	\$12.00

NO DAMAGE TO PLANTS ENROUTE FROM UPSET AGAR

Contents of one 500 ml. Flask—Cross No. 407

Flascom Seedlings

Now you can purchase seedlings of flask size plants and plant them into community pots when you receive them.

No damaged plants, from upset agar, to worry about during transit.

FLASCOM SEEDLINGS are seedlings ready to be planted into community pots from flasks. We remove the young plants from the surface of the agar and ship them in our special container. When you receive the package all you have to do is plant the seedlings into community pots.

High shipping charges are eliminated as the contents of the flask are sent via Air Mail in a small package.

We have sent out trial shipments of our **FLASCOM SEEDLINGS** and in every case our customers are highly satisfied with the results.

OUR CUSTOMERS SAY:

"The seedlings out of the flask arrived in perfect condition and I wish to thank you very much for sending them to me. Upon arrival the plants seemed perfectly conditioned to be placed in community pots. Evidently excluding light and water from the plants for several days are the proper requirements for conditioning,"
—Honolulu, T. H.

"I am very pleased with all the seedlings you sent. They are nice and sturdy and have fine roots. Your idea is very clever and saves all the packing at your end and the awful air express bill at mine."—Los Angeles, California.

FLASCOM SEEDLINGS are available now and may be selected from our flask list. Price of the Flascom Seedlings are the same as the flask prices, and can be shipped year round.

HAWAIIAN CUSTOMERS—A permit is required for the shipment of Flascom Seedlings.

Special Offering of Seedlings

OUT OF COMMUNITY POTS

Many requests have been received for an assortment of established community pot size seedlings. Orchid fanciers often desire to order a few plants of several varieties in order to maintain a variety of choice stock in their collection. We offer such a selection below in three assortments. The seedlings which are now established in community pots will be shipped out of community pots. The following assortments are limited. Each assortment contains twelve plants of each cross, or a total of sixty plants, which are large enough to be planted into Individual pots.

ASSORTMENT No. 1

\$40.00

- 283 Lc. South Esk var. Judy Doig x Lc. Boadicea var. British Queen. (large dark)
- 217 Lc. Baldur var. Magnificent x Lc. Helston. (large - good form)
- 268 C. Empress Frederick x Lc. Avignon var. Flora. (very dark)
- 270 Lc. Avignon var. Flora x C. Dinah AM RHS. (dark - good form)
- 272 C. Labiata Alba var. Prince of Wales x C. Eleanore Alba. (white colored lip)

ASSORTMENT No. 2

\$50.00

- 272 C. Labiata Alba var. Prince of Wales x C. Eleanore Alba. (white colored lip)
- 245 Lc. Princess Ishtar var. Hawaiian Queen AM AOS x Blc. Louisa. (large dark)
- 268 C. Empress Frederick x Lc. Avignon var. Flora. (very dark)
- 260 C. Suavior var. Glory x C. Rita Sladden. (white winged)
- 220 Bc. Hartland var. Glowing Ember x C. Belgica var. Robert Doig. (large dark)

ASSORTMENT No. 3

\$60.00

- 283 Lc. South Esk var. Judy Doig x Lc. Boadicea var. British Queen.
(large dark)
- 272 C. Labiata Alba var. Prince of Wales x C. Eleanore Alba. (white colored lip)
- 217 Lc. Baldur var. Magnificent x Lc. Helston. (large good form)
- 245 Lc. Princess Ishtar var. Hawaiian Queen AM AOS x Blc. Louisa. (large dark)
- 197 C. Leda x Lc. South Esk var. Sea Ranch. (rich dark)

Instructions for Sowing Seed

When you first receive our seed sowing kit, plan to keep this equipment in a clean dry place. The most important factor in the process of sowing Orchid seed is **CLEANLINESS**. Contamination will prevail if conditions are not clean and dry. Our kit is made primarily for the amateur, who does not have the available equipment for weighing out small amounts of chemicals in accurate proportions in preparing the stock solution.

Our kit is available in three sizes, namely, three, five and ten flask sizes. The following instructions are the same regardless of the kit size. Our kit contains flasks, stock solution bottle, seed sterilizing bottle, sowing glass, seed sowing pipet, and small packages of agar. Place the contents of the kit on a table and do not remove the cotton stoppers until you are ready to measure out the stock solution. When removing the cotton stopper ease it out slowly from the neck of the bottle. Do not pull the cotton stopper out fast as this will cause an inward rush of air which might contain germ spores. Shake the stock solution bottle well before using. On the side of the stock solution bottle you will find a measuring guide, whereby you can determine the number of cubic centimeters to pour into each flask. Pour the contents of each package of agar into each flask. Pour 150 c.c. of stock solution into each flask. Pour this very carefully in order that you will not get the neck of the flask wet. Replace the cotton stopper tightly in each flask.

If you own a pressure cooker, the flasks can be placed upright in the pressure cooker and cooked for fifteen minutes at fifteen pounds pressure. Two cups of tap water for each cooking is usually sufficient in the pressure cooker, however, this does not apply to all pressure cookers. When releasing the steam from the pressure cooker, allow the steam to be released slowly. If the steam is allowed to be released too fast it will cause the cotton stoppers to be forced out of the bottles. If you do not have a pressure cooker, stand the flasks in an ordinary sauce pan, over gas or electric heat. Pour enough water in the pan before turning the gas on to keep the pan from burning, which would be about two inches of water. Boil the contents of the flasks for one hour. Should the water in the pan evaporate before the cooking time allotted, add hot water during the operation. The cooking of the flasks allows the chemicals to be mixed thoroughly and also will sterilize the inside of the flask. Remove the flasks from the pan and proceed with the same operation until all the flasks are cooked. Place the bottles at a 25° angle and allow to cool over night. Plan to sow your seed the following morning.

SOWING THE SEED

The small 15 c.c. sterilizing bottle contains 10 c.c. of Calcium Hypochlorite. Pour enough seed into this bottle to sow three flasks. Shake the sterilizing bottle very thoroughly for at least one minute. Allow the seed to settle for three minutes then shake again. Pour the contents from this bottle into the open glass marked 'Sowing Bottle'. Insert the seed sowing pipet into the solution in the seed-sowing bottle and force about two inches of seed and liquid in the pipet by squeezing the rubber cap between your thumb and fore finger. Hold one of the flasks in your left hand and remove the cotton stopper from the flask slowly. Hold the pipet in your right hand and remove the cotton with the same hand by placing the cotton between the small finger and the palm of your hand. Do not lay the stopper on any exposed surfaces. Insert the seed sowing pipet into the flask and release the seed and liquid by applying pressure to the rubber cap. If you do not have enough solution in one application in the seed-sowing pipet, repeat this same operation while the flask is still open. Tilt the flask back and forth and sideways to allow the seed to be washed over the entire surface of the agar. Pour off any excess liquid back into the seed-sowing bottle. Repeat this operation as many times as is required to sow all the other flasks. The stopper can be flamed before replacing it into the flasks, this will help eliminate contamination. A small amount of Mercuric Bichloride can be placed on the cotton stopper after it has been inserted into the flask. Extra precaution may be taken to eliminate contamination by tying a small piece of onion skin paper over the cotton and neck of each flask before placing it in your flask room.

CONTAMINATED FLASKS

In the event contamination appears on the surface of the agar a few days after the seed is sown, remove the flask to the sowing room. Open the flask and remove the small mold with a small sterilized spoon or some other small instrument that will reach into the flask, whereby you may remove the contamination. Take the seed-sowing rod and pour some calcium hypochlorite into the hole in the agar where the contamination was removed. Once again flame the cotton and replace the flask in the flask room.

IMPORTANT

No contamination should appear in the flasks if instructions are followed as given above. Contamination will appear if cleanliness of the room and hands does not prevail. Do not sow the seed where there is a stir in the air. If at all possible sow the seed in a small closed room. An excellent place to sow the seed is in the bathroom. Turn on the hot water shower and the steam will cleanse the bathroom before sowing. Allow the steam to settle before working with the flasks.
